

1 Drag and drop the PDFs you want to compare

Alternatively, you can click on the browse button “...” to select a PDF from the file browser.

2 A preview of the imported PDF is displayed

Pressing “Insert Blank Page” inserts a blank page before the selected page.

A list of loaded PDFs will be displayed.

3 Press “Start Comparison” to start the comparison process

4 Comparison results are displayed

Pages with no differences are marked with a “✓” and pages with differences are marked with an “○”.

5 Press “View Differences”

Comparison Screen

The comparison screen allows you to compare the differences in the PDFs.

The differences are highlighted in green. (You can choose between red, blue, and green highlighting.)

Two viewing modes are available.

Viewing Mode 1: Compare left and right views

- ① Back to the first screen
- ② Viewing Mode Switching (S,D)
- ③ Page feed (Up/Down cross key, press and hold)
- ④ Viewpoint Scaling (mouse wheel)
- ⑤ PDF left/right swap (Tab)
“Flicking proofreading” can be performed by switching in succession.
- ⑥ Continue to automatically swap PDFs left and right (Shift + tab)
- ⑦ Show/hide highlights in difference display (A)
- ⑧ Page feed only for left PDF
- ⑨ Page feed only for right PDF
You can also compare with another page. This is useful when pages are interchanged.

Viewing Mode 2: Overlap and compare

In this viewing mode, you can move, rotate, and zoom in and out to compare PDFs. This is useful for comparing elements that have been moved within the same page.

- ① Operation mode switching
(viewpoint shift, PDF shift, rotation, zoom in/out)
- ② Restore the initial placement of the moved PDF

Right-click and drag to rotate around the clicked position.

Even if the operation mode is set to PDF move-rotate-expand mode, the viewpoint can be moved by pressing the space key or clicking the middle button.
